

Specification INTRAD RS

Product Description

INTRAD RS is ideal for large area protection to walls and partitions.

INTRAD RS is an embossed flat sheet which is adhesive bonded to the wall to give large area protection. The standard 2.44 x 1.22m sheet can be thermoformed and cut to shape giving a fully integrated finish where required.

INTRAD RS is extremely versatile. It can be thermoformed to fit around obstacles such as pipe boxing or ducting, neatly trimmed behind sockets and switches or simply installed as flat panels. It can also be used to compliment our wall protection rails and is often fitted between mid and low level buffers to offer complete protection to the lower half of a wall.
